

posturite

24 Hour Seating Brochure

Posturite understands what is required when it comes to control room seating. Having supplied 24-hour chairs to some of the best-known organisations in the UK, we have the expertise and experience to make sure you get the right chairs for your staff.

Often sitting at the desk for hours at a time, managing incidents, dealing with problems, managing stressful situations and being able to concentrate for long periods of time are just a few of the demands on a control room professional. Being comfortable should be a prerequisite.

Sitting-related problems take a long time to develop. Often you won't know there's a problem with your posture or your chair until the pain sets in, and by then it's probably already affecting your concentration, wellbeing and productivity. Musculoskeletal problems like back pain and upper limb disorders (commonly known as RSI) can affect your mood, make it difficult to concentrate and of course impact all areas of your life, not just work.

Bringing ergonomics to 24-hour workspaces

Creating a comfortable, ergonomic workplace is just as important in continuous use environments as it is in an 8-hour office space. In such areas, people tend to be asked to undertake more desk-based activities, be it for surveillance, security, or response availability. For this reason, the risk of both musculoskeletal injury and chair malfunction/breakage can be particularly high. It is important to provide staff with equipment that supports them safely and comfortably as they carry out their day-to-day tasks.

Task seating challenges in continuous use environments

- Multiple users of each chair
- Typically, 'Hot-Desking' environments
- 2-3 times more frequent adjustment (compared to conventional 8-hour task seating)
- Predominantly desk-based tasks that encourage prolonged static sitting periods
- Colleagues working in close-proximity so negative feeling can spread quickly

Task chairs used in 24-hour spaces must be...

- Appropriate for continuous-use areas
- Robust in design, manufacture, and component materials
- Ergonomic in both pad shape and adjustability
- Adaptable for a wide range of user sizes and needs
- Aesthetically appropriate for the environment

The right seating can

Increase
comfort

Reduce risk of
musculoskeletal
disorders

Reduce
absenteeism

Cut maintenance
costs

Boost staff
morale

Improve
productivity

Posturite are here to help

Independent

We research the market for you and have access to products from the market leaders. We recommend the right chairs for you.

Complete service

We support you through the entire process, from product selection all the way through to ethical disposal at end-of-life.

Ergo-expertise

This is what truly separates us from the competition. Our team has a wealth of ergonomic knowledge to share with our clients.

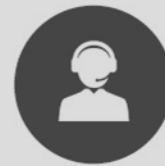

National support

Whether you have one large facility, or several regional sites, we can help wherever chairs are required.

1 or 1000 chairs

Whether you need a specific chair for an employee or a thousand chairs for an entire premises, we can handle any requirement.

Ongoing support

Our support doesn't stop once we've completed the installation – we'll support you through the entire life-cycle of your chairs, and beyond.

Thanks to long-standing relationships we have with our manufacturing partners, we are able to provide access to a huge range of products at competitive pricing. Ensuring you receive the best value options available. Seating is an investment in both the space and the workforce.

Key Questions

When choosing a task chair for continuous use areas it's important to look at the finer details. The below are questions that we look to answer during the selection process.

Why are you looking to buy new chairs?

What is the driver for the purchase? Improved comfort and support, increased durability, lower price? To understand what improvements are available, it's important to look at the chairs currently in use to have a baseline from which to explore.

What is the feedback like on the current chairs?

Uncomfortable? Increased requests for reasonable adjustment chairs? Pads too large for smaller users? Too hot on warmer days? Breaking too regularly? Slow turn-around for the replacement of damaged parts?

The space: What shape are the desks? How many monitors?

The chairs need to fit at the workstation at which they are going to be used. A measurement from the floor to both the topside and underside of the worktop will allow the correct sized gas stem to be selected. Also, the number of screens used in the space may influence how much wing support is required to encourage maximum back support.

What tasks are carried out in the space?

Are the users carrying out solely DSE tasks?

Are phones also in operation by the staff and have headsets been provided?

What are shift patterns like and are breaks away from the workstation encouraged by management and embraced by staff?

What are the employees' requirements and expectations?

For any chair to be considered successful in the space it's being used, those using it must experience and endorse the associated benefits. It's worth considering previous feedback relating to the chair being replaced, as well as what the staff feel would be beneficial. For example, armrests may not be considered a requirement of the space, but the users may insist that they are.

Posturite seating selection

Sustainability

Posturite is committed to reducing our environmental footprint by cutting emissions and by using our expertise to source the most responsibly manufactured products.

With our insight and experience in this area, clients often ask us, *“How do we make more sustainable choices in regard to our task seating?”*

Product

Selecting a chair with a strong sustainability story is a great place to start.

Take the **RH Logic 200/220** for example. The chair has achieved environmental accreditations such as GREENGUARD GOLD, as well as an EPD (*Environmental Product Declaration*) statement (ISO14025).

The chair has also been designed with recyclability at its core, with the chair being compiled of 60% recycled content, upholstery that includes no glues or staples, and pads that are replaceable in situ, using a popper-type design.

Maintenance

A key consideration when determining the sustainability of a task chair is looking at how long a unit will last once purchased, and finding ways of reducing the rate at which replacements are required. Repeatedly buying new chairs to replace broken ones clocks up additional product miles, packaging, and contributes to additional waste.

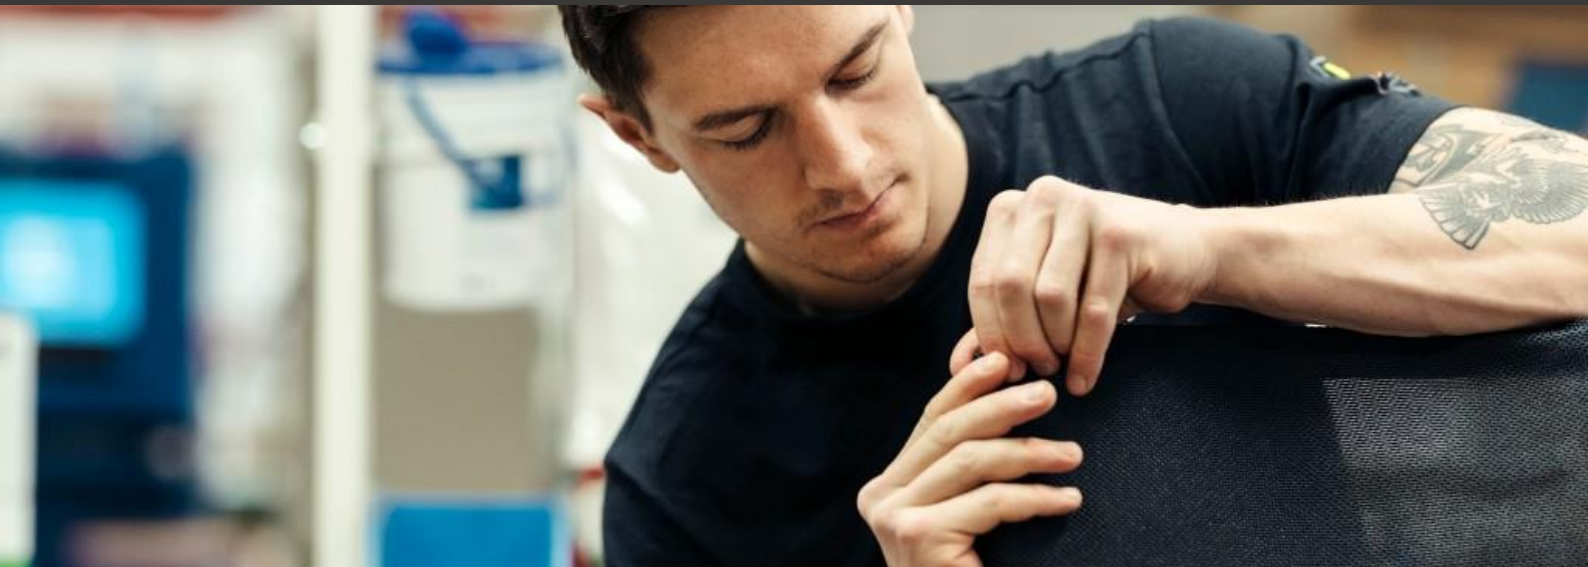

Establishing an audit and maintenance programme from the outset reduces the rate at which chairs must be taken out of use and replaced with new. Swapping out parts as and when required, rather than disposing of whole chairs, prolongs the lifespan.

Removal & Ethical Disposal

When chairs do reach their end of life, we strongly encourage an ethical and sustainable disposal story.

We work closely with partners who are experts in this area, presenting clients with a range of removal options, and selecting the most appropriate plan for client and chair(s) in question; from upcycling, to reuse via charitable initiatives, to ‘zero to landfill’ ethical disposal routes.

Posturite aftercare

Benefits of a chair audit

Increase chair lifespan

Prevent maintenance issues

Increase comfort for employees

Reduce risk of accidents

Boost staff morale

Improve productivity

What a chair audit involves

- Safety check on the chairs
- Minor adjustments and repairs carried out
- Status of each chair documented
- Recommendations for further repairs, if needed
- Spreadsheet confirming actions taken
- Quote offered for any larger items at an agreed discount
- Return to site to make any further remedial actions

Why choose us?

- Friendly, knowledgeable, experienced chair auditors
- Able to provide certificate of completed works
- Flexibility to complete audit on weekends or out of hours to prevent disruption
- We have excellent industry connections with fast access to parts and products.
- Save money and lower your environmental impact by prolonging the life of your chairs
